Exam A

QUESTION 1

A technician has racked a new access switch and has run multimode fiber to a new location. After installing an extended-range 10Gb SFP in the core switch, the technician installed a 10Gb SFP in the access switch and connected the port to the new extension with a fiber jumper. However, the link does not display, and the technician cannot see light emitting from the core switch. Which of the following solutions is MOST likely to resolve the problem?

- Swap the fiber pairs in one of the SFPs
- Replace the jumpers with single-mode fiber
- Set the correct MTU on the new interface
- Install an optic that matches the fiber type

Correct Answer: B

Section: (none)

QUESTION 3

A technician is installing a new wireless badging system on a hospital network. The requirements of the badging system are for it to have its own SSID and low power levels. The badging system has to cover 99.9% of the hospital. Which of the following is the BEST action to take to meet the system requirements?

- Install additional WAPs
- Install external antennas
- Move the WAPs closer to the more populated area
- Change the antenna types

Correct Answer: A

Section: (none)
